Product Launch
New 10 Gigabit Ethernet Switch

Concurrent Technologies Plc (AIM: CNC), a world leading specialist in the design and manufacture of high-end embedded computer products for critical applications in the defence, aerospace, telecommunications, transportation, scientific and industrial markets, is pleased to announce the launch of a new 10 Gigabit Ethernet switch.

The FR 351/m06 switch will enable customers to create server grade solutions based around a single switch and multiple VPX™ boards and is designed to optimise the Size, Weight and Power (SWaP) metrics of rugged server configurations. This should provide solutions for Edge server applications including image and signals analysis, video encoding and simulation.

Glen Fawcett, CEO, Concurrent Technologies Plc, commented:

"This new switch enables our customers to construct server class solutions that can analyse, encrypt and transcode data in harsh environments. It has been designed in response to a number of customer requests to migrate applications from rack mount servers that operate in a data centre, to a smaller and more rugged format. This type of application complements our traditional solution of a switch and single processor at the centre of an I/O centric system."

Note to Editors:

About Concurrent Technologies Plc

Concurrent Technologies Plc develops and manufactures high-end embedded computer products for use in a wide range of high performance applications within the telecommunications, defence, security, telemetry, scientific and aerospace markets. Using mainly Intel® processors, including the latest generation Intel® Core™ i7 processors, Intel® Xeon® and Intel® Atom™ processors, the Company offers a wide range of computer products which are designed to be compliant with industry specifications including those for products used in extremely harsh environments. Other processors now include NVIDIA® Tegra® K1 devices.
