**Concurrent Technologies Plc**  
(the 'Company')

**Product Launch**

**New AdvancedMC™ module with PCI Express® connectivity**

Concurrent Technologies Plc (AIM: CNC), a world leading specialist in the design and manufacture of high-end embedded computer products for critical applications in the defence, aerospace, telecommunications, transportation, scientific and industrial markets, is pleased to announce the launch of a new AdvancedMC™ module.

The AM F5x/msd module uses a choice from the latest Intel® Xeon® processors and is designed for use in long life-cycle applications within the test, wireless, scientific and semiconductor markets. Processing capability is complemented with high speed memory access and a removable solid state disk module with up to 128GB capacity for the Operating System, application code and data storage. External connectivity includes a range of standard interfaces including connections for high speed networking.

**Glen Fawcett, CEO, Concurrent Technologies Plc, commented:**

*"Our AdvancedMC modules appeal to a wide variety of applications and markets. Their modularity and relatively small form-factor makes it easy to create high performance embedded compute functions by inserting them into a backplane or carrier. Following on from our successful AM 91x/x1x series of modules, AM F5x/msd provides a useful performance increase with improved networking and extends our expected longevity for AdvancedMC modules beyond 2021."*

**Note to Editors:**

**About Concurrent Technologies Plc**

Concurrent Technologies Plc develops and manufactures high-end embedded computer products for use in a wide range of high performance applications within the telecommunications, defence, security, telemetry, scientific and aerospace markets. Using mainly Intel® processors, including the latest generation Intel® Core™ i7 processors, Intel® Xeon® and Intel® Atom™ processors, the Company offers a wide range of computer products which are designed to be compliant with industry specifications including those for products used in extremely harsh environments. Other processors now include NVIDIA® Tegra® K1 devices.
