Product Announcement
New 3U VPX I/O board

Concurrent Technologies Plc (AIM: CNC), a world leading specialist in the design and manufacture of high-end embedded computer boards for critical applications, is pleased to announce the launch of a new 3U VPX I/O board.

The BA 2TR/501 is a multi-channel communications board offering systems integrators an efficient way to introduce up to 8 serial communication ports into a VPX system. The board is especially suited to applications requiring communication with legacy devices that are still widely used in the defence, industrial control and aerospace markets.

As the board is available in commercial grade, extended temperature and rugged conduction cooled variants, it is suitable for use in benign as well as very harsh environments.

Glen Fawcett, CEO, Concurrent Technologies Plc, commented:

"This I/O product complements our range of 3U VPX processors, switches, carriers and simplifies the integration process for our customers. In addition to our hardware product ranges, we have increased our offering of firmware and software products to provide extra security measures, networking capability, and virtualization support. All our VPX products support wide operating temperature ranges and are also available in rugged conduction-cooled variants to suit a wide range of applications."

Note to Editors:

About Concurrent Technologies Plc

Concurrent Technologies Plc develops and manufactures high-end embedded computer products for use in a wide range of high performance, long life cycle applications within the telecommunications, defence, security, telemetry, scientific and aerospace markets, including applications within extremely harsh environments. The processor products traditionally feature Intel® processors, including the latest generation Intel® Core™ i7 processors, Intel® Xeon® and Intel® Atom™ processors. More recently NVIDIA® Tegra® K1 devices have been added to the product ranges along with complementary switch and I/O boards. The products are designed to be compliant with industry specifications and support many of today's leading embedded Operating Systems. The products are sold world-wide.
