Product Announcement
3U VPX Processor Board

Concurrent Technologies Plc (AIM: CNC), a world leading specialist in the design and manufacture of high-end embedded computer boards for critical applications, is pleased to announce a new processor board.

The TR E8x/msd board is based on the Intel® Xeon® E-2200 processor family announced by Intel® yesterday. The board boasts a rich assortment of features including on board graphics and provides straightforward connectivity to peripheral boards.

Security is critical on the majority of applications today and there are several security features included as standard. These can be supplemented by our Sanitization Utility and Guardian packages to maximise protection against external threats.

The combination of functionality and security make these boards particularly suitable for supervisory compute, display and storage tasks appealing to both existing and new customers across a very wide range of applications in the military, aerospace, transportation and industrial markets.

The boards will be available in variants suitable for commercial and harsh environments.

Jane Annear, Managing Director of Concurrent Technologies, commented:

"This latest board demonstrates our commitment to bring solutions to market at the same time as Intel announce new processor technology. While the main targets for this type of product are in the defence community, we now have customers using our VPX products in both utilities and gas & oil extraction applications that are benefitting from the inherent reliability and robustness of these products."

Note to Editors:**About Concurrent Technologies Plc**

Concurrent Technologies Plc develops and manufactures high-end embedded computer products for use in a wide range of high performance, long life cycle applications within the telecommunications, defence, security, telemetry, scientific and aerospace markets, including applications within extremely harsh environments. The processor products feature Intel® processors, including the latest 8th generation Intel® Core™ processors, Intel® Xeon® and Intel® Atom™ processors. The products are designed to be compliant with industry specifications and support many of today's leading embedded Operating Systems. The products are sold world-wide.
