Concurrent Technologies Plc

("Concurrent" or the 'Company')

**Concurrent Technologies Enters the Systems Market
Launch of Helios Rugged Vision Computer System**

Concurrent Technologies (AIM: CNC), a world-leading specialist in the design and manufacture of high-end embedded computer boards for critical applications, has entered the Systems market through the launch of Helios, its new off-the-shelf, ruggedised vision computer system. This has the potential to significantly expand Concurrent's addressable market.

Concurrent's stated strategy has been to expand beyond the provision of Plug in Cards (PICs) into systems that utilise its own processor PICs augmented with best-in-class PICs from supplementary manufacturers. Highly rugged and small form factor products like Helios, which is designed to withstand the harshest of environmental conditions, are targeted at a section of the Defence Systems market estimated in 2020 to be worth \$105m growing at 17.9% per annum.

Concurrent is committed to providing a range of ruggedised systems solutions and Helios has the flexibility to meet a number of customer applications including command and control display, degraded vision enhancement and 360° vehicle situational awareness. The core system will enable the launch of future storage, sensing and control systems by harnessing different combinations of application specific PICs.

Miles Adcock, CEO of Concurrent Technologies, commented: *"The launch of Helios is a milestone achievement for Concurrent, representing our entry into the substantial and fast-growing Systems market. Helios also demonstrates our commitment to create solutions based on customer demand utilising the expertise of our research and development teams. Expanding our capabilities to meet the growing demand of the Systems market has been a part of our stated strategy and we expect to make further announcements as we continue to enhance our portfolio and capabilities in this field."*
